

Matrix Token (MTIX) — Whitepaper 2026

Version 2.0 · Oct 25, 2026 · @Jihad Ismail

Abstract

Matrix Token (MTIX) is relaunching on its original 2021 BNB Smart Chain contract as a payment token for medical services coordinated by Matrix Group. There is no new contract, no token swap and no change to the 1,500,000,000 supply. Since 25 October 2026 the contract charges 0% tax on every transfer.

This paper explains what MTIX is used for, who holds it today (read live from the blockchain), how the treasury will sell and buy back tokens, and the risks a holder should understand before buying.

Item	Value
Name / symbol	Matrix Token / MTIX
Network	BNB Smart Chain (BEP-20)
Contract	0x33b783a4833f7613ccb6569a9f39a261b311afbb
Total supply	1,500,000,000 MTIX (fixed, no mint function)
Decimals	9
Original launch	2021, presale price \$0.001
Transfer tax	0% (reflection 0%, liquidity 0%)
Max per transfer	15,000,000 MTIX (owner exempt)
Holders	1,479 addresses
Primary DEX pool	PancakeSwap v3 MTIX/USDx, 15,000,000 MTIX permanently locked

Background

MTIX launched in 2021 at a presale price of \$0.001 and reached an all-time high of \$0.045 before the 2022 market collapse. The first launch raised about \$300,000 in under two months.

- **2021:** contract deployed and audited, presale, first listings on PancakeSwap V2, CoinMarketCap and CoinGecko.
- **2022–2025:** the wider crypto crash (including the FTX failure) took the price down. CoinTiger, an exchange that listed MTIX, shut down and kept its users' deposits.
- **During the downturn:** Matrix Group bought back most of the circulating supply at low prices, to keep the token alive rather than abandon it.
- **October 2026:** relaunch on the same contract, with taxes removed and a permanently locked PancakeSwap v3 pool.

We keep the original contract on purpose. Every holder from 2021 keeps their tokens, and the full trading history stays public and checkable.

Problem and solution

Patients from countries with capital controls often pay large black-market premiums just to move money abroad for surgery. MTIX gives them a direct digital way to pay for treatment coordinated by Matrix Group.

Matrix Group has coordinated medical treatment since at least 2015, mainly organ transplant cases from Syria and Iraq, with partner hospitals and university transplant centres. Its patients face three payment problems:

1. **Moving money out:** bank transfers from their home countries are restricted or slow.
2. **Cost of conversion:** informal exchange routes add large commissions on top of the treatment price.
3. **Timing:** delays in payment can delay a time-critical operation.

MTIX lets a patient or their family buy tokens, send them in minutes, and settle the coordination fee. Matrix Group converts what it needs and pays its partner hospitals in standard currency, so hospitals never handle crypto.

Utility

MTIX has two uses: paying for medical coordination services at a discount, and trading on MatrixCEX and decentralised exchanges.

Use	How it works	Status
Medical payment	Patients pay Matrix Group's Syrian company in MTIX and receive a 5–10% discount on the coordination fee, for treatment at any partner hospital in Syria, Turkey or other countries	Planned, subject to legal review
MatrixCEX	MTIX/USDT trading on Matrix Group's own exchange	Planned at exchange launch
DEX trading	PancakeSwap v3 MTIX/USDX pool, listed on Swap Ocean	Live
Charitable support	A dedicated charity wallet funds treatment for patients who cannot pay	Wallet funded; distribution rules to be published

The discount is the token's core value: a patient who holds MTIX pays less for the same service, wherever they are treated in Matrix Group's hospital network. Matrix Group pays partner hospitals in US dollars, so hospitals never handle crypto. More Matrix Group entities may accept MTIX in other countries where local law allows it. MTIX is not a share in Matrix Group, does not pay dividends, and does not promise any return.

Tokenomics

About 1.02 billion MTIX (67.7% of supply) sit in the two main treasury wallets, mostly bought back during 2022–2025. In total 330.5M MTIX (22%) are locked on-chain: the 315.5M charity reserve in a verified time-lock until 25 October 2028, and 15M in the v3 pool forever. No tokens can be minted.

Treasury wallets hold most of the MTIX supply

Two main treasury wallets 67.7% of 1,500 million MTIX · read from BNB Smart Chain

Blue = wallets controlled by the Matrix Group treasury. Grey = wallets outside treasury control.

BNB Smart Chain balances read 25 Oct 2026 · total supply 1,500,000,000 MTIX

Other holders include wallets whose owners lost their keys, and some treasury operating wallets, so the tradable float is smaller than the 26.9% shown. Treasury operating wallets follow the same sale rules and are included in the monthly treasury report.

Wallet	Role	Address
Treasury multisig	Contract owner and main treasury (600M MTIX); Safe, 2 of 3 signatures	0xd6e0...91cd
Operating wallet	Mother wallet for daily operations and sale funding (99.5M MTIX)	0x8a70...b43a
Charity	Charity reserve, 315.5M locked until 25 Oct 2028 in contract 0x894bdba95565acf87f815158b077a65bfcc62196	0xbf1f...c6a5
v3 pool	Locked liquidity	0xe0d0...6003

Treasury policy and use of funds

The treasury is the main seller of MTIX, and it sells only under these published rules. Buyers should know this before they buy.

1. **No treasury sale below \$0.001**, the original presale price. Below that level the treasury may only buy back.
2. **One public treasury account** on each venue. The treasury never trades with its own wallets or accounts.

3. **Sales are spread out**, never dumped at once, with a published monthly limit.
4. **Buybacks** use part of trading revenue when the price falls below the treasury's last sale level.
5. **Monthly report** of every treasury wallet balance, the amount sold, the amount bought back, and where the money went.
6. **Main treasury addresses are public** (see Tokenomics), and every sale from any treasury wallet, including operating sub-wallets, follows these same rules.

Money raised from treasury sales goes to three Matrix Group projects:

Project	Purpose
MatrixCEX	Launch and operation of the exchange
Hospital in Syria	Medical infrastructure for transplant and specialist care
Real estate in Syria	Development projects of Matrix Group

The split between projects will be published with each monthly report.

Smart contract and security

The contract is a reflection-token design (a SafeMoon fork) with no mint function, no blacklist and no pause. The owner keeps a few powers, and we list them here so nobody has to discover them alone.

Owner power	Current setting	What it means for holders
Set reflection and liquidity tax	Both 0%	The owner could raise taxes again, but the owner is now a 2-of-3 multisig; we commit to keep them at 0%
Exclude an address from fees or rewards	Used for the v3 pool	Needed so the pool works with a reflection token
Max amount per transfer	15,000,000 MTIX	Limits how much any non-owner wallet can move in one transaction

Owner power	Current setting	What it means for holders
<code>lock</code> / <code>unlock</code> ownership	Not in use	The design lets an owner give up ownership temporarily and take it back; it has never been used (no previous owner is stored) and we will never use it to fake a renounce
Auto-liquidity (<code>swapAndLiquify</code>)	Off	Was tied to the retired PancakeSwap V1 router

Security steps:

- **Audit:** the contract was reviewed in 2021 (Audit Review by The Byte Detective / Kronobit), published in the project repository.
- **Locked liquidity:** the 15,000,000 MTIX in the PancakeSwap v3 pool sit in a position whose NFT was sent to the burn address, so it can never be withdrawn.
- **Done:** on 25 Oct 2026 ownership moved to a 2-of-3 Safe multisig (`0xD6E04d71805681d7A0C53cd42B939faA96c891CD`), so no single key can change contract settings.

Roadmap

The relaunch is in Phase 1 now. Dates after 2026 are targets, not promises.

Medical payments start only after the legal review gate

roadmap · 4 phases, 1 legal gate

The legal gate is firm: no patient pays in MTIX until a written legal opinion confirms it is allowed.

Risks and legal notice

MTIX is a high-risk digital asset, and you can lose all the money you put into it.

- **Price risk:** the price is set by the market and can fall to near zero. Nothing in this paper promises a price.
- **Concentration:** the treasury holds most of the supply. Its sales can move the price, which is why the rules above exist.
- **Liquidity:** trading volume is small, so large orders move the price sharply.
- **Legacy wallets:** about 66 million MTIX sit in two dormant wallets outside our control, one linked to the defunct CoinTiger exchange. If they wake up, they can sell up to 15 million MTIX per transaction.
- **Bots:** automated arbitrage bots trade MTIX between pools.

- **Owner powers:** listed in the security section above; any change now needs 2 of 3 signatures from the treasury multisig.
- **Regulation:** crypto payments are restricted in some countries, including Turkey. MTIX payments are received only by a Matrix Group entity in a country where this is allowed, currently the Syrian company, and only after legal review. Matrix Group's Turkish company does not accept MTIX.

This paper is information, not an offer of securities or investment advice. Check the laws of your country before you buy.
